Your Name

2026-06-29

Today's leading language models contain upwards of a trillion parameters, pretrained on tens of trillions of tokens. The transformer architecture that underpins them ([Vaswani et al. 2017](#)) keeps improving with scale, as these trillions are necessary for learning and representing all the patterns in written-down human knowledge.

Aside. This is a margin note — an unnumbered aside that, in the web version, lives in the right margin. Use it for tangents, definitions, or asides.

In contrast, post-training involves smaller datasets and generally focuses on narrower domains of knowledge.¹ This post is a placeholder that demonstrates the typography and layout of the blog, including citations, footnotes, and sidenotes.

A second-level heading

Body copy is set in Iowan Old Style at 17px with a generous line height, matching the reference design. Links like [this one](#) pick up the subtle underline treatment, and inline `code` is rendered in red monospace.

An italic third-level heading

Lists use square bullets:

- First point about something interesting
- Second point with a bit more detail
- Third point to round things out

Block quotes are styled with a thin left rule and a muted foreground color, exactly as on the reference site.

¹This sentence is anchored by a numbered footnote. Because the blog sets `reference-location: margin`, it renders as a sidenote in the margin rather than at the bottom of the page.

Math and code

Inline math such as $e^{i\pi} + 1 = 0$ renders via KaTeX, and display math works too:

$$\mathcal{L}(\theta) = \mathbb{E}_{x \sim \mathcal{D}}[-\log p_{\theta}(x)]$$

A fenced code block, here distilling a teacher into a student ([Hinton, Vinyals, and Dean 2015](#)):

```
def distill(student, teacher, batch):
    logits_s = student(batch)
    logits_t = teacher(batch).detach()
    return kl_divergence(logits_s, logits_t)
```

Closing thoughts

Replace this file with your real writing. New posts dropped into `posts/` show up on the blogroll automatically. Add references to `references.bib` and cite them with `[@key]`; footnotes (`[^id]`) and `::: {.column-margin}` blocks both surface in the right margin.
